

Cambridge Audio Aero speaker range

Classic looks, radical innovation, stunning audio quality...

At first glance, the new Aero range of speakers may look fairly familiar. But look again... The range uses innovative full-range BMR (balance mode radiator) drivers instead of traditional tweeters to move the crossover point between drive units away from most sensitive frequencies of human hearing. The result is a sound that's dramatically more immersive and natural. But don't just take our word for it – listen to a pair, we think you'll be amazed.

Using BMR drivers solves a common problem for traditional speakers – the crossover point when audio shifts from the tweeter to mid-range or woofer is right in the middle of the most sensitive frequency range for human ears.

Switching from one driver to another, with different sonic qualities often from using different construction techniques and materials, results in an audible change of register; the result is disjointed. With a full-range BMR driver and

conventional cone woofer working together, that crossover spot is moved away from those key frequencies for a fuller, more coherent sound.

There's a second advantage to BMR drivers – they offer a wider, more dispersed sound field. The result is the Aero range delivers pin-sharp stereo and surround effects, but without the small sweet spot of traditional speakers. That makes them ideal for modern homes, as they can be placed in a wider range of places than traditional speakers and enjoyed from anywhere in the room.

With a more coherent and immersive sound, and a classic minimalist design, the Aero range is innovative, stylish and ideal for those who take audio quality very seriously. And the range is perfect for both stereo and surround sound setups, complete with dual monopole/bipole speakers designed specifically for rear or rear and side channels.

Aero 2

Stand-mount speakers

2¼-inch BMR plus custom-designed 6-inch driver delivering 40Hz-22kHz frequency response. Available in black or walnut finish.

Aero 3

Surround speakers

Dual monopole/bipole configured surround sound unit (bipole for rear surround, dual monopole for rear and side effects in a 7.1 system) with 2 4-inch BMR drivers delivering 30Hz-22kHz frequency response. Available in black or walnut finish.

Aero 5

Centre speaker

2¼-inch BMR plus 2 custom-designed 6-inch drivers delivering 50Hz-22kHz response. Available in black or walnut finish.

Aero 6

Floorstanding speakers

2¼-inch BMR plus 2 custom-designed 6-inch drivers delivering 30Hz-22kHz response. Available in black or walnut finish.

Aero 9

Subwoofer

A subwoofer with two 10-inch drivers, one front-firing and one down-firing ABR (auxiliary bass radiator) to eliminate bass port air noise; 500W RMS high-efficiency Class D amplifier. Available in black or walnut finish.
